The series "Lecture Notes in Networks and Systems" publishes the latest developments in Networks and Systems—quickly, informally and with high quality. Original research reported in proceedings and post-proceedings represents the core of LNNS.

Volumes published in LNNS embrace all aspects and subfields of, as well as new challenges in, Networks and Systems.

The series contains proceedings and edited volumes in systems and networks, spanning the areas of Cyber-Physical Systems, Autonomous Systems, Sensor Networks, Control Systems, Energy Systems, Automotive Systems, Biological Systems, Vehicular Networking and Connected Vehicles, Aerospace Systems, Automation, Manufacturing, Smart Grids, Nonlinear Systems, Power Systems, Robotics, Social Systems, Economic Systems and other. Of particular value to both the contributors and the readership are the short publication timeframe and the world-wide distribution and exposure which enable both a wide and rapid dissemination of research output.

The series covers the theory, applications, and perspectives on the state of the art and future developments relevant to systems and networks, decision making, control, complex processes and related areas, as embedded in the fields of interdisciplinary and applied sciences, engineering, computer science, physics, economics, social, and life sciences, as well as the paradigms and methodologies behind them.

Indexed by SCOPUS, INSPEC, WTI Frankfurt eG, zbMATH, SCImago.

All books published in the series are submitted for consideration in Web of Science.

Preface

This book contains the written versions of most of the contributions presented during the International Conference on Partial Differential Equations and Applications, Modeling and Simulation organized by "Applied Mathematics and Scientific Computing Laboratory" and "Systems Engineering Laboratory", at Sultan Moulay Slimane University Beni Mellal, Morocco, from June 1 to 2, 2021.

The workshop has provided a setting for discussing recent developments in a wide variety of topics including the partial differential equations, dynamic systems, optimization, numerical analysis, fuzzy sets theory, fractional calculus and its applications, to name the main topics. The workshop has brought together leading academic scientists, researchers, and research scholars to exchange and share their experiences and research results on all aspects of applied mathematics, modeling, algebra, economics, finance, and applications in various domains. It has also provided an interdisciplinary platform for researchers, practitioners, and educators to present and discuss the most recent innovations, trends, and concerns as well as practical challenges encountered and solutions adopted in the fields of the broadly perceived applied mathematics.

The chapters address various aspects that are of interest and concern for academic scientists, researchers, and research scholars in many fields, both in the sense of theoretical and applied challenges.

We hope that the various contributions of this book will be useful for researchers and graduate students in applied mathematics, engineering, physics, and even for other, notably practitioners in these and related fields. Some basis knowledge of analysis and control in systems theory and dynamical systems is just needed.

We wish to thank the authors for their interesting and novel contributions and the peer reviewers for their deep and insightful reviews which have greatly helped improve the papers included.

And last but not least, we wish to thank Dr. Tom Ditzinger and Mr. Holger Schaepe for their dedication and help to implement and finish this important publication project on time, while maintaining the highest publication standards.
